

GREASES

PETROFER
industrial oils and chemicals

PETROFER HIGH-PERFORMANCE NEW TECHNOLOGY SPECIAL GREASES

By making a clear difference to the other products, Petrofer Greases;

- Create a clear difference to the other products with their superior load carrying capacity, excellent resistance to water, scale, acid and detergent;
- Reduce the amount of greasing and accordingly reduce your consumption considerably,
- Extend the greasing period,
- Extend maintenance periods and reduce maintenance costs by increasing bearing life,
- Prevent workforce loss and reduce downtime,
- Are also very resistant to washing with water, reduce your grease waste and significantly improve your waste treatment costs.

PRODUCT	APPLICATION
PETROGREASE TAMOS SERIES	PETROGREASE TAMOS Series are calcium soap thickened greases that are suitable for use on the bearings which are not operating under heavy load, the operating speed is low and the operating temperature does not exceed 80 °C.
PETROGREASE SANUS SERIES	PETROGREASE SANUS Series are lithium soap thickened, multi-purpose greases recommended for the bearings working under light-medium load and spin.
PETROGREASE SANUS EP SERIES	PETROGREASE SANUS EP Series are lithium soap thickened greases which have outstanding load carrying capacity recommended for the bearings working under severe condition such as heavy load and water.
PETROGREASE DORADA EP SERIES	PETROGREASE DORADA EP Series are lithium complex soap thickened greases which can be used as long life grease in roller bearings, water pumps, electric motors, couplings, cardan joints, and in general wherever high efficiency greases are needed with severe requirements.
PETROGREASE MARTELLO SERIES	PETROGREASE MARTELLO Series are calcium sulfonate based greases which have higher dropping point, making them attractive for some high-temperature applications. They are recommended for low speed bearings, hot rolling mills, protection of parts in sea ambiances, horn and various mechanisms on vessels and boats, mechanisms in general exposed to high temperatures variations from -15 to 160°C, bearings and mechanisms soaked in tap or sea waters, chains and drives in general in corrosive sea ambiances, lubrication of steel continuous casting and animal feed pelletiser granulators.
